

OSCAR Open Source Electronic Medical Record Demonstration

The BC OSCAR User Group invites you to come and hear about Free / Open Source software and how physicians and midwives are driving the OSCAR (Open Source Clinical Application Resource) Electronic Medical Record in BC. There will be a presentation by Dr David Chan, from McMaster University, OSCAR's founder, and the OSCAR user community in BC. OSCAR users will demonstrate the EMR including use with voice recognition software, tools for maternity and newborn care, leading chronic disease management tools, prescribing tools, billing and much more!

OSCAR is an open-source (free), Canadian EMR, developed by a collaborative community of programmers and users. Users pay no licensing costs and have the freedom to choose from a range of support companies. There are over a thousand OSCAR users and over a million patients on the system nationally, and it has won several prestigious awards for IT innovation. It's ease of use, excellence in programming, high level of functionality, and low costs for ongoing support and implementation, are part of why OSCAR is experiencing rapid growth. For more information visit <http://www.oscarcanada.org/>
