

Fourty Five Minutes ... where we have been since 9.06.....

WCB billing

Changes:

- Can fill form from echart or billing screen
- Form can be filled in stages without validation but is validated before attaching to a bill. (Staff can start populating the form with the patients address.)
- Same form can be used to bill multiple WCB visits without reopening a form.
- WCB search fields are now "enter" key sensitive.
- WCB ID will now pull

Billing Features

- Added link to invoice list from bill

The screenshot displays the 'oscarBC Billing' interface. At the top, there's a header 'oscarBC Billing'. Below it, patient information is shown: Patient: BARKER, BOB, Age: 86, Patient Status: AC, Roster Status: GP general practice. There are dropdown menus for 'Assigned Physician' (doe, doctor), 'Billing Physician' (Select Provider), and 'Service Location' (C|Continuing Care facility). A 'Clarification Code' dropdown is set to 'PEMBERTON'. Service details include 'Billing Type' (Bill MSP), 'Service Date' (2010-4-17), 'Service to date', 'After Hours' (No), 'Time Call', 'Start (HHMM 24hr)', 'End (HHMM 24hr)', 'Dependent' (No), 'Sub Code' (O - Normal), and 'Payment Method' (ELECTRONIC). A table of visits is shown below:

Visits	Description	\$ Fee	ER Visits	Description	\$ Fee	Premiums	Description	Fee
<input type="checkbox"/>	18100 VISIT IN OFFICE (AGE 80+)	44.22	<input type="checkbox"/>	18200 VISIT - OUT OF OFFICE (AGE 80+)	53.06	<input type="checkbox"/>	00112 VISIT, EMERGENCY	107.87
<input type="checkbox"/>	18101 COMPLETE EXAMINATION IN OFFICE (AGE 80+)	98.31	<input type="checkbox"/>	18201 COMPLETE EXAMINATION - OUT OF OFFICE (AGE 80+)	117.98	<input type="checkbox"/>	01200 CALL-OUT CHARGE - EVENING	57.88
<input type="checkbox"/>	18102 INDIVIDUAL COUNSELLING IN OFFICE	76.00	<input type="checkbox"/>	18202 INDIVIDUAL COUNSELLING - OUT OF OFFICE	81.30	<input type="checkbox"/>	01201 CALL-OUT CHARGE - NIGHT	81.30

- Moved confirm button from bottom of the list in the ICD Search list
- Ability to override fee code amounts
- Override billing rules.

 Address: City:
 Province: ON Postal Code:
 Billing Information Data Center V6242 Payee Number: 12345 Practitioner Number: 12345 Bill Type: MSP

-Referral Billing Docs are now ordered in alphabetic order

-eligibility

-Where to show this from?

-might need some screen shots because live test patients don't produce great results.

The major thing that is left out here is the ability to create a receipt for a private bill with multiple items on it. (after the original)

I have been working on the ability to create a statement but this requires some extra tables and something we are trying not to do in the middle of a release.

Also i wonder if it makes more sense to do this as a movement so that all billing systems use one third party billing system (instead of each province having a separate one).

In this sense MSP and OHIP could just be third party modules on this system. This would makes sense because all the reporting could then be shared too. And we could add more third party modules on (quebec,alberta and/or sunlife). A patient would just have a default payee and you would use that system. Would enable practices on the borders of provinces to run both systems. more later.

Bugs fixed

[Notes are only added to the first billed item](#) Not sure to bring this up or not. Might cause to much discussion

[Date Changes are not shown in invoice list screen](#) -- now looks at the right column

NEW Rx

New layout, no more drop boxes, One screen to control everything instead of 4 or 5.
Script Looks more like it will on paper.

-Separate lists for acute / long term / inactive

-Can re-prescribe all long term at once

- Long term meds are now considered active even if they have run out.
- Edit Rx after they have been completed
- Mitte for drugs with a difficult quantity or even tapered doses.
- Discontinue a drug (shows in the echart, can click view to see it)
- custom Note (for physio etc. will print with not qty or repeats
- Rx Instructions default to how you prescribed last time or how this patient was prescribed this drug last
- Example dosages (not in stonechurch yet) Lets you see how others in the clinic have used this drug.
- Show you can search Septra (message saying drug is inactive and when)
- RX graph over time "Timeline Drug Profile"
- Allergy is now warned on the actual drug
- Interactions and warnings are actually noted on the drug.
- Colours now more inline with the rest of oscar (clicking on the "profile legend")
- Clicking on "more" will show lesser used fields. Here you can add drugs added by other docs ie specialists. (this shows in the drug profile, far right)
- Drug of Choice Button (Type "bites" hit Drug of Choice button, click Tetracycline, the first line drug here doesn't work yet.) The real time search doesn't work here either yet, you can either erase the 'e' and retype it. or click search and show that you can still use the old search if you want. (The search doesn't work yet because of how the "TETRACYCLINE" get's put in the search box. The live action search is on the keyboard press event and that never happened.)

Eform store

- Show how to export an eform (will post screen shot)
- Show how to import (will post screen shot)
- Show how to load an eform from the store (will post screen shot) There was a bug in this one with eforms created by using the editor. The bug is fixed but the eforms created before the fix still cause problems.

Random things

- quick link to demographic after creating it.
- upload now shows in the echart (can click view to see it)
